

Manual Introdutório CoCalc

Julio Cesar Basilio Marcos Vinicius Issa

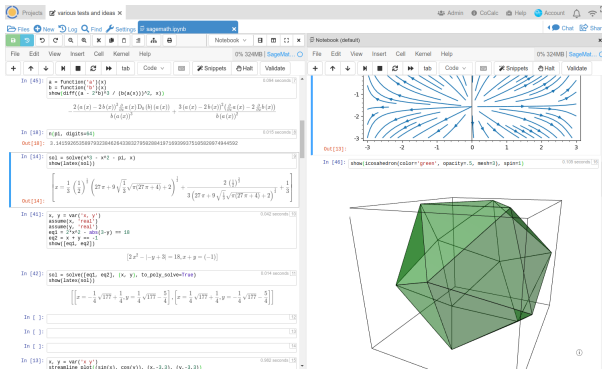

Victor Maudonet Americo Cunha

Universidade do Estado do Rio de Janeiro – UERJ

O que é o CoCalc?

O CoCalc é um espaço de trabalho virtual online para cálculos, pesquisas, colaboração e documentos de autoria. Os trabalhos no CoCalc são chamados de **"Projects"**. Cada projeto consiste em arquivos, acessíveis apenas para você e com quem compartilhar.

*Pictures obtained from CoCalc.com.

O que é o CoCalc?

Você e seus colaboradores podem editar esses arquivos ao mesmo tempo, o que significa que suas alterações são sincronizadas entre todos vocês em tempo real. Eles abrem em seu editor online associado e você começa a trabalhar interativamente no ambiente do CoCalc.

Exemplos:

- os arquivos que terminam em `*.ipynb` realiza as implementações no **Jupyter Notebook** (Python);
- os arquivos `*.m` realiza as operações do ambiente **GNU Octave** no CoCalc;
- os arquivos `*.tex` abre um editor de documentos **LaTeX** no CoCalc;

*Logos obtained from Google Images, several sources.

Criando uma conta

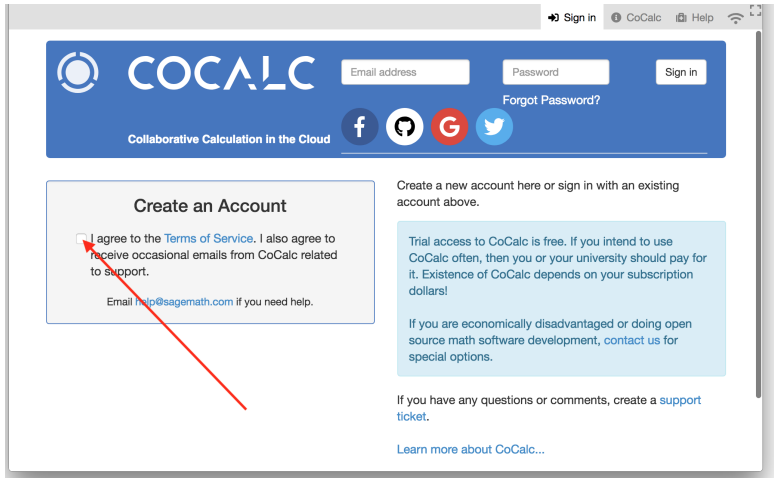

Em sua primeira visita ao **CoCalc.com**, você verá a tela de inicial. Clique em **Sign in!** :

The screenshot shows the CoCalc website homepage. The header includes the CoCalc logo and navigation links: Features, Software, Pricing, Policies, Shared Files, Doc, Sign In, Jupyter, LaTeX, Linux, Octave, Python, R Stats, Teaching, Terminal, X11, Compare, and API. The main content area has a blue background with the text "Your best choice for teaching remote scientific courses!" and "Save weeks of class time troubleshooting software and make your TA's more effective." Below this text are two buttons: "Run CoCalc Now" (green) and "Sign In" (white). A red arrow points from the "Sign In" button to the "Sign In" link in the header. To the right of the main text is a preview of the CoCalc interface, showing a Jupyter notebook with a plot of a vector field.

Concorde com os **Termos de Serviço** ("Terms of Service"):

The screenshot shows the CoCalc website's account creation interface. At the top, there's a navigation bar with the CoCalc logo, the tagline "Collaborative Calculation in the Cloud", and social media icons for Facebook, GitHub, Google+, and Twitter. Below this, there's a "Create an Account" section with a checkbox for agreeing to the Terms of Service. A red arrow points to this checkbox. To the right of the checkbox, there's text explaining that trial access is free but subscription is required for frequent use, and a link to contact support for special options. At the bottom, there's a link to create a support ticket and a link to learn more about CoCalc.

☐ I agree to the [Terms of Service](#). I also agree to receive occasional emails from CoCalc related to support.

Email help@sagemath.com if you need help.

Create a new account here or sign in with an existing account above.

Trial access to CoCalc is free. If you intend to use CoCalc often, then you or your university should pay for it. Existence of CoCalc depends on your subscription dollars!

If you are economically disadvantaged or doing open source math software development, contact us for special options.

If you have any questions or comments, create a [support ticket](#).

Escolha um método de login. Além de se inscrever com seu endereço de e-mail, você pode criar usando suas credenciais do Facebook, Github, Google ou Twitter. Caso escolha inscrever-se por e-mail, preencha os campos indicados na imagem ao lado (primeiro nome, último nome, e-mail e senha):

*Picture from Cocalc.com

Criando um projeto

Agora que você está com uma conta, crie seu primeiro projeto. Clique na área **Project title** e insira um nome de projeto, por exemplo **"My Project"** e clique em **Create Project**.

*Picture from CoCalc.com

Criando um projeto

Depois que o projeto for criado, você o verá aparecer na sua lista de projetos. Clique no nome do projeto para abri-lo:

Como criar um notebook Jupyter/GNU Octave?

Depois de abrir um projeto, você está pronto para criar um arquivo.

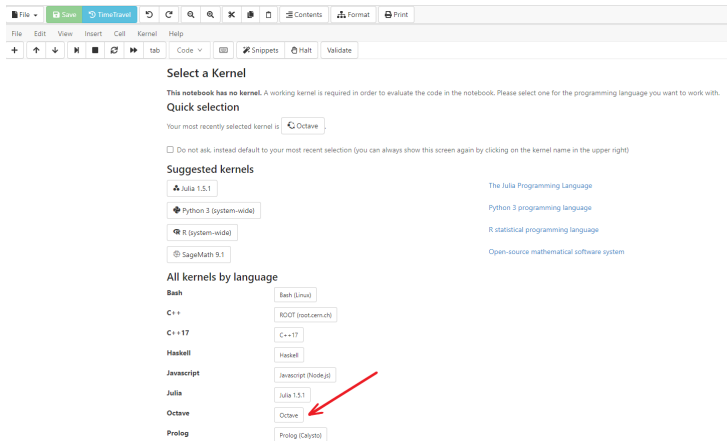

Clique em **(+)New** e insira o exemplo onde diz **example**, nomeie seu arquivo e clique no **Jupyter Notebook**.

Como criar um notebook Jupyter/GNU Octave?

Clique na Kernel que será utilizada. Escolha a Kernel **Octave**.

The screenshot shows the Jupyter Notebook interface. At the top is a menu bar with 'File', 'Edit', 'View', 'Insert', 'Cell', 'Kernel', and 'Help'. Below the menu bar is a toolbar with icons for saving, undo, redo, search, and other functions. The main area displays the 'Select a Kernel' dialog. It states: 'This notebook has no kernel. A working kernel is required in order to evaluate the code in the notebook. Please select one for the programming language you want to work with.' Under 'Quick selection', it says 'Your most recently selected kernel is Octave'. There is a checkbox 'Do not ask, instead default to your most recent selection (you can always show this screen again by clicking on the kernel name in the upper right)'. Under 'Suggested kernels', there are buttons for 'Julia 1.5.1', 'Python 3 (system-wide)', 'R (system-wide)', and 'SageMath 9.1'. To the right of these are links: 'The Julia Programming Language', 'Python 3 programming language', 'R statistical programming language', and 'Open-source mathematical software system'. Under 'All kernels by language', there is a list of languages on the left and buttons for each language on the right. The languages listed are Bash, C++, C++17, Haskell, Javascript, Julia, Octave, and Prolog. The buttons on the right are 'Bash (Linux)', 'ROOT (root.cern.ch)', 'C++17', 'Haskell', 'Javascript (Node.js)', 'Julia 1.5.1', 'Octave', and 'Prolog (Calypto)'. A red arrow points to the 'Octave' button.

Select a Kernel

This notebook has no kernel. A working kernel is required in order to evaluate the code in the notebook. Please select one for the programming language you want to work with.

Quick selection

Your most recently selected kernel is **Octave**.

☐ Do not ask, instead default to your most recent selection (you can always show this screen again by clicking on the kernel name in the upper right)

Suggested kernels

- Julia 1.5.1
- Python 3 (system-wide)
- R (system-wide)
- SageMath 9.1

The Julia Programming Language
Python 3 programming language
R statistical programming language
Open-source mathematical software system

All kernels by language

Bash	Bash (Linux)
C++	ROOT (root.cern.ch)
C++17	C++17
Haskell	Haskell
Javascript	Javascript (Node.js)
Julia	Julia 1.5.1
Octave	Octave
Prolog	Prolog (Calypto)

Como criar um notebook Jupyter/GNU Octave?

Insira uma linha de código **Octave** na primeira célula do notebook.

E clique em **Run** ou pressione **Shift-Enter** para executar o código.
